Michael Faraday (1791–1867)
Michael Faraday was one of the most influential scientists of his time – known not only for his experiments and discoveries but also for opening up the world of science with his dazzling series of lectures at London’s Royal Institution. One of his most famous demonstrations of electromagnetic induction – where an electric current passed through one coil induces a current in the other coil – is represented here. The magnitude of his discoveries and their influence on the progress of science and industry, position Faraday as one of the greatest scientific discoverers of all time.
