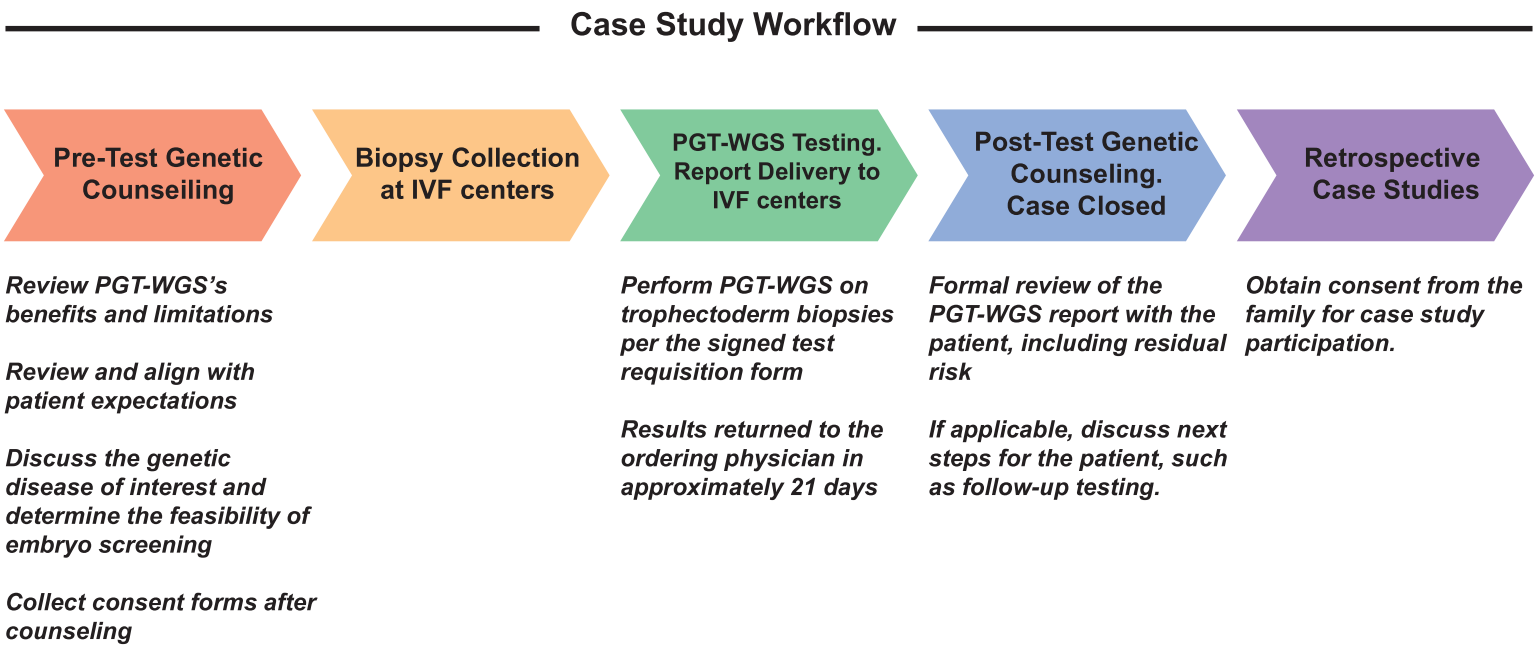
Figure S1



Case Study Workflow
Pre-Test Genetic Counseling
Biopsy Collection at IVF centers
PGT-WGS Testing. Report Delivery to IVF centers
Post-Test Genetic Counseling. Case Closed
Retrospective Case Studies
Review PGT-WGS's benefits and limitations
Review and align with patient expectations
Discuss the genetic disease of interest and determine the feasibility of embryo screening
Collect consent forms after counseling
Perform PGT-WGS on trophectoderm biopsies per the signed test requisition form
Results returned to the ordering physician in approximately 21 days
Formal review of the PGT-WGS report with the patient, including residual risk
If applicable, discuss next steps for the patient, such as follow-up testing.
Obtain consent from the family for case study participation.
