

# YOUR PARTNER IN AEROSPACE

**R&D innovation starts with you. Give your researchers fast access to high-impact research in aerospace engineering.**

As an early adapter of new technology, materials and innovation in engineering design, the aerospace industry is highly dependent on reliable sources of the latest scientific and technical findings. As a librarian in this industry, you're not only responsible for providing high quality research content and supporting efficient R&D workflow, you also need to show a clear return on your information budget. These are big challenges and our mission is to help you exceed them.

- Count on scientific experts to provide you with research, content and market related support
- Access to leading journals, eBooks and databases that enable technological breakthroughs
- Tailored to your needs, saving time by giving your team access to the specific content they need

ADVANCING  
**DISCOVERY**

- High quality
- Easily accessible
- Targeted content

# Leading your team to the latest findings in Aerospace

Springer Nature's Aerospace portfolio covers the core branches of both aeronautical and astronautical engineering with everything from fluid dynamics, lightweight materials to chemistry and thermodynamics as well the applications of these fundamentals to air- and spacecraft design. We provide a one stop content solution that supports key R&D related to your core business as well as all aspects of aerospace technology, and the latest in materials engineering, physics, electronics and increasingly critical topics such as AI, Robotics and Cybersecurity. By choosing Springer Nature you ensure that your organisation keeps ahead of the innovative industry trends by maximising the benefits of digitisation and automation.

With Springer Nature, your teams can access broad collections of original content covering all aspects of astro- and aeronautical engineering, materials engineering and next generation digital technology. Our journal, eBook, proceedings and database content support all phases of the R&D innovation cycle including analysis, design, testing and manufacturing of air- and spacecraft and their components. Access to our extensive, original and quality assured content ensures your engineers can leverage the knowledge they need to achieve the next technological breakthrough.

Our flexible licensing means you select exactly the information your researchers need, so you only ever pay for what you're using. Quick reporting tools let you easily demonstrate value to other departments and adapt your collections so that you always satisfy user-demand. With Springer Nature, your information reputation is strong, your researchers are productive and your organisation stays at the forefront of innovation.

## What our customers say

 "The best gift my company could offer me!"

 "Practical, fast and rich in number of titles proposed in all areas"

 "I like being able to have the choice of e-book or printed"

 "It's cheaper than you think"

**Information Specialist and Engineers, Thales Alenia Space, Rome**

## Partner with Springer Nature

**Product development, publishing and business models are user-led, ensuring that we can continue to meet the changing needs of your researchers and engineers.**

We work closely with our customers, not only sharing ideas, but also discussing development to gain insights into how Springer Nature can offer more flexibility. We do this through our summit meetings, advisory board meetings and one-on-one account visits.

Meet and understand the needs of our partner organizations and customers

Actively involve our partners and customers in feedback and new products

Make content easily discoverable and accessible

Optimize our content solutions

# Optimize your workflow by integrating our content

We deliver content aimed at everyone working within the industry, whether in design, development and testing or construction, manufacture and production, we provide everything from fundamental background information to the latest case studies and applications. We recognise that R&D groups need to be able to discover and access scientific and technical information quickly and efficiently to support the various phases of the engineering workflow.

### Design & Develop

Find out what others have done when faced with a similar engineering challenge. Ensure your innovation is keeping pace with the latest developments

### Test

Need to ensure the optimal testing method is employed. Find out how others have tested similar designs and discover datasets which provide context to your analysis

### Construction/ Manufacture/Production

Achieve an effective and efficient process based on industrial and mechanical engineering fundamentals and incorporating the latest in digital and automated technology

Products	Time Span			
<p>Journals</p>	Innovations from the last 1-2 years	Journals articles are the result of in-depth studies and strong peer review process. They provide detailed and high quality information on new engineering principles and applications	Newest test methods reviewed by the engineering community with articles increasingly accompanied with supporting data	Latest industrial and mechanical engineering applications including optimization, control and automation
<p>eBooks</p>	Fundamentals and innovations from the last 2-5 years	Mature descriptions and discussions of engineering fundamentals and recent applications including the highly authoritative Springer Technical Handbooks	In-depth background information as well as detailed descriptions of the application of testing methods	Springer's Engineering eBook program is the world's strongest and most authoritative especially in regards process automation, control and optimization
<p>Proceedings</p>	Innovations and case studies from the last year	Majority of the latest engineering applications are published in proceedings. Publication times are very short and therefore provide the most current applications	Proceedings focus on applications and case studies providing the broadest range of engineering challenges, test methods and data	Provides very recent case studies including challenges encountered and solutions found. Includes the world's largest collection of proceedings on Industry 4.0
<p>Databases</p>	Expertly distilled tertiary information	SpringerMaterials and Nano: <ul style="list-style-type: none"> <li>provide critical chemical and physical parameters of materials</li> <li>help determine the right materials to be used in new applications</li> <li>rapid access to key data points and parameters</li> </ul>	Materials data is required as a guide and reference to understanding the limits of materials being tested and to suggest key parameters that require analysis	Construction, manufacturing and production often present new materials engineering challenges. Process optimization requires access to trusted materials data

# How to get access to the content you need

Flexible business models enable you to get access to the content you need, maximizing usage and return on investment. With licensing models from low entry tailored collections to licensing single content collections, archived content or the entire content database.

Request a trial to see how your organization can benefit from partnering with Springer Nature... Or ask a representative about the ideal solution for your organization, department or team today!

At Springer Nature we advance discovery within the industry sector, by connecting the research and development community with the most relevant content. Companies around the world choose Springer Nature as a trusted source that publishes robust and insightful research that supports the development of new areas of knowledge and our content is relied upon to increase effectiveness, support decision making, and accelerate R&D and innovation.
