

AdisInsight Patents

Drug-centric summaries of the patents and market exclusivities that protect drugs globally

Designed to be used by any user, not just patent experts

AdisInsight Patents offers advanced drug-specific indexing and intuitive searching, enabling the use of familiar search terms such as drug name, indication, mechanism of action, drug class, formulation, location, and company to find the patents and exclusivities relevant to your analysis.

Aggregates the global patents and exclusivities for a drug into a single Drug Patent Profile

AdisInsight Patents provides a one-to-one relationship between a drug profile and a drug patent profile, summarizing the key information from patent and market exclusivities protecting the drug.

Supports strategic decisions by enabling quick and easy understanding of key patent information

AdisInsight Patents presents key information such as patent number, expiry date, claim type, and country in easy to read tables, visualizing the protection landscape in the USA, EU-5, Japan, and Rest of the World.

New
content set

"If you want to get good ideas, you need to see what is already patented, because a lot of good ideas come from a combination of existing ideas."

Charles Besson

AdisInsight introduces Patents – to help you discover the right direction with focused drug-patent landscapes

Once a drug loses its patents, its sales can decline by up to 90% very quickly

The problem

The regulatory protections afforded to drugs (patents and market exclusivities) are of interest to many different stakeholders in the drug development process. A key point of interest is around the timing of generic entry of a pharmaceutical entity and the impact this will have on the market.

Patents are complex documents and it is difficult to discover all those that exist globally for a specific drug. Several different exclusivities may further extend the protection on a drug and these must also be understood to accurately determine the timing of generic entry.

Many users of such information are less familiar with what it means and how to find it compared with the experienced IP researchers they employ to identify relevant patent information for them. Without a simple and intuitive tool to discover patent information to inform strategic decisions, patent attorneys are frequently relied on and this can be time-consuming and costly. Analysis of a patent landscape with multiple drugs would require extensive data extraction and collation.

Finding the right track

The solution

AdisInsight Patents links global patents, and US and European exclusivities, to the drugs they protect.

A simple intuitive search helps users to quickly and easily discover patents and exclusivities relevant to a particular drug or market area, including patent applications and expired patents.

These can be segmented or pinpointed using the detailed drug indexing available within AdisInsight, including for example by Location, Company, Mechanism of Action or Drug Class. Expiry dates have been calculated and are shown in simple tables, providing at-a-glance summaries of loss of protection.

This enables a comprehensive analysis of the market by any user. AdisInsight Patents helps users to find patent and exclusivity data themselves, and to save time by providing their IP researchers a more tightly defined scope.

AdisInsight Patents – for fast and focused business decisions

Patent expiry and subsequent generic entry will have an impact on the potential success of a drug. Also, the loss of market protection of a competitor drug can rapidly affect both market share and pricing.

Whether you are evaluating

- Scenarios for your own marketed drug
- A new development candidate
- Licensing and investment opportunities
- Market share in light of competitive patent expiries

AdisInsight Patents can help you

- Reliably predict when competitive patent expiry will affect the drug you are analysing
- Inform strategic decisions to minimize the impact of patent expiry
- Highlight clearly in what area(s) your drug could maintain a competitive advantage
- Manage financial expectations

It can be difficult to determine exactly where there might be an opportunity to utilize a compound outside its market protection, since drugs have many patents and regulatory exclusivities protecting them, which differ from country to country.

If you are interested in identifying

- Candidates for generic manufacture
- Opportunities for patenting new formulations
- International markets where a drug is not patent-protected
- When cheaper generic alternatives will be available, in order to project and manage future budgets

AdisInsight Patents can help you

- Get a clear understanding of the patents and exclusivities still enforceable for a drug in any given country, and when they will expire
- Uncover the best opportunities and select the best commercial path
- Highlight the window for action

As a drug nears the end of its patent and regulatory protection, there are several strategies companies employ to extend the earning potential of the drug in the face of generic entry and the introduction of competitors.

If you want to

- Manage end-of-life scenarios for branded drugs
- Develop a differentiation strategy vis-à-vis competitors
- Monitor for infringement of own patents

AdisInsight Patents can help you

- Gain greater insights into what is happening across the competitive landscape
- Discover the market extension strategies competitors are employing, such as new formulation patents
- Identify the most promising gaps

Who is AdisInsight Patents for?	What questions can it answer?
Competitive Intelligence	How will patent expiry affect the competitive landscape ?
Business Development & Licensing	
Generics Developers	What opportunities exist for drugs without patent protection?
Business Development	
Payors	
Business Development	What is the best strategy for a product approaching patent expiry?
Marketing

Keeping the future in focus

The AdisInsight Drug Patent Profile

The drug is at the center of the new Drug Patent Profile, which provides a quick overview of the patents, claim types, and expiration dates. Results across the competitive landscape can easily be exported and analysed, and you can receive alerts when new information you are interested in is added.
