

Nano

natureresearch

Dear Researcher,

To help you discover new nanotechnology literature faster and easier, the library has subscribed to [Nano](#), a comprehensive research solution for nanoscience and technology by Nature Research.

Articles

Nano offers a daily updated collection of nanotechnology articles from over 190 journals. Nano-specific search filters allow you to quickly evaluate article relevance beyond title and abstract (e.g. quick insights from full text highlight content related to your specific search input).

Nanomaterial Summaries

In addition, with Nano you benefit from the largest collection of manually curated nanomaterial data. It includes detailed descriptions of hundreds of thousands of different nanomaterials and devices, their physical, chemical and biological properties, potential uses and the various methods by which they are prepared.

Patents

Nano also provides access to millions of nanotechnology - related patents selected based on nano-related classification. Patent evaluation is made easy with patent claim information within a single click, as well as standardised patent summaries translated into English.

Nano helps scientists to stay on top of important research results and R&D output, and spend less time searching for articles and data related to nanotechnology.
