Secure access to what
you need

What is it?

The Springer Nature Tailored Collection is a new business model that was created to fit your organization's content needs, by delivering only the most relevant content within your research focus. This means that your usage bandwidth and pricing is based on your usage intensity and the amount of researchers within your organization that have a need for primary and secondary STM content.

How does it work?

When you choose the Tailored Collection for your organization, a Springer Nature Domain Expert will consult with you to create a unique research profile. This profile is determined by:

1. Usage/denial history (where available)
2. Keywords on your organization's website (research highlights, products, services, processes)
3. Patent history (where available)

Based on your profile, a set of keywords and topics that match all content relevant for you will be created. Springer Nature's Business Development team then uses these keywords for generating your personal collection on rd.springer.com. During the license period, your organization has the chance to modify the content selection and title list at any time, until you are completely satisfied that the content included is meeting your needs. Any time a new publication that matches your profile is published it will automatically be added to your collection.

Why choose this model?

- Includes all content available on the Springer for R&D platform (current and archive) including Journals, eBooks and Reference Works.
- Only pay for what you need - The collection can be fine-tuned at any time during the license period to grant flexibility for your organization.
- Specific items can be excluded or included (e.g. products, copyright year, discipline).
- Usage information is available regularly so you can control your downloads.
- Access content on a trusted, high quality platform
- Better management of denied content
