

In scholarly publishing, there are often multiple versions of an author's publication available, both before and after it is published in a peer reviewed journal. Explore the key differences between a preprint, accepted manuscript (AM) and the version of record (VOR).

	Statement	Preprint	AM	VOR
	Immediately accessible upon publication via gold open access (OA)			
	Free-to-read, share and re-use upon publication via gold OA			
	Connects the final published article to open research data, open protocols, open code, and transparent peer review reports			
	Represents the most up-to-date version of the research at all times			
	Makes new research available prior to acceptance in a journal			
	Hosted on the journal website			
	Accepted by the publisher following any applicable journal, editorial and peer review processes			
	Has a stable DOI and downloadable citation details			
	Easily navigable full text, with layout features, embedded figures and enhanced in-line references linking to full-text articles			
	Authors and affiliations linked to author profiles and ORCID iDs
