

# PHYSICAL SCIENCES

Nature-branded research and review journals

# Understanding, debating and sharing science since 1869

Nature Research has a strong tradition in the physical sciences, beginning with its flagship journal *Nature* which publishes the most important scholarly research in science and technology.

The physical sciences portfolio also includes authoritative Nature Research journals and the acclaimed *Nature Reviews* series. The publications are leading titles in their fields - select them with confidence.

## **Nature Physics**

*Nature Physics* publishes papers of the highest quality and significance in all areas of physics, pure and applied. The journal content reflects core physics disciplines, but is also open to a broad range of topics whose central theme falls within the bounds of physics. Theoretical physics, particularly where it is pertinent to experiment, also features.

## **Nature Astronomy**

*Nature Astronomy* publishes research, reviews and commentary at the cutting edge of astronomy, astrophysics and planetary science. The journal aims to promote closer interaction between diverse astronomy-relevant disciplines, consulting widely with researchers at all stages of their careers, and more than one third of commissioned authors are women.

## **Nature Machine Intelligence**

New applications for intelligent machines and software are emerging, in addition to the availability of large datasets, substantial computing power and breakthroughs in algorithms. *Nature Machine Intelligence* publishes research that underpins artificial intelligence and robotics to explore how these advances will lead to the next phase of the digital age.

## **Nature Food**

The world faces unprecedented challenges in sustaining the health of the planet and 10 billion people occupying it by 2050. *Nature Food* provides researchers and policy-makers with a breadth of evidence and expert narrative for securing and optimizing food systems for the future.

### Nature Computational Science

Nature Computational Science launches in response to increased interest and volume of literature about the connection between computer science (including scientific computing and data science), mathematics, and natural sciences. The journal will publish across key themes of computational science, including, but not limited to cheminformatics, geoinformatics, computational models, materials science, and urban science.
