

Vance Supplemental Fig S3

Figure S3 *Paupar* levels do not change significantly upon *Pax6* knockdown. N2A cells were transfected with either a shRNA expression construct targeting *Pax6* or a non-targeting control. *Pax6* and *Paupar* transcript levels were quantified using qRT-PCR three days later. Samples were normalised using *Gapdh* and results are presented relative to the non-targeting control (set at 1). Bars represent mean values $\pm$ s.e., $n=3$.
