

Supplementary Figure 13: Immunostaining analysis of mouse eye cross sections for Sticky-trap. Dissections were performed 2 days post intravitreal injection of Sticky-trap (10 μ g). Sticky-trap (red signal) binds to the iris (A; panel A), ciliary body (A; panels B, C1), zonular fibers (A; panels B, C1), lens (A; panels B, C1, C2), and inner-limiting membrane (A; panels B, C1, C2, and B) of the eye. *ir*; iris, *cb*; ciliary body, *l*; lens, *ilm*; inner limiting membrane, *inl*; inner nuclear membrane, *onl*; outer nuclear membrane, *gcl*; ganglion cell layer, *rpe*; retinal pigmented epithelium cell layer. Scale bars, 50 μ m.
