

Supplementary Figure 5: (A) Tumour growth kinetics of xenografts established with Pc-3 transgenic cancer cells. Error bars represent s.e.m. ($n=10-12$ tumours; $***P<0.001$, one-way ANOVA). (B) H&E analysis of Pc-3 xenograft sections. Asterisks indicate small tumour nodules under the skin 50 days after initiation of transgene (traps) expression. Scale bars, 500 μm (left column) and 25 μm (right column).
