

A**B****C****Figure S3:****CpG-B induces more GC in dLN**

21 days after immunisation with in IFA (no CpG-B) or IFA+CpG-B (with CpG-B), dLN were collected and sections were performed and stained with anti-IgD (blue), anti-CD4 (green) and anti-GL7 (red) (A). Number of GC (GL-7+) were enumerated (B) as well as surface area of GC out of the total surface area of B follicle (IgD+)(C) using the software Zen Lite (Carl Zeiss). (n=6/group, mean±SEM).
