

ESM Fig. 3

SOX10 and PHOX2B do not co-express with TH and their expression is not affected by *Th* deletion. (a) Co-Immunostaining for SOX10 (green) or PHOX2b (green) and TH-mouse (red) in pancreatic sections of E13.5. White-X indicates blood cells. Scale bar, 50 μ m. (b, c) Quantitative real-time PCR of individual pancreases at E12.5. The levels of *Sox10* and *Phox2b* transcripts were normalised to 18S rRNA and *Th*^{+/+} values were set at 1. Results represent the mean $\pm$ SEM of at least ten pancreases per genotype.
