The effect of age on longitudinal measures of beta cell function and insulin sensitivity during the progression of early stage type 1 diabetes

Ele Ferrannini, Andrea Mari, Gabriela S.F. Monaco, Jay S. Skyler, Carmella Evans-Molina

ESM Figure 1 – Diabetes-free survival function in 360 subjects randomised to receive oral insulin (*insulin p.o.*) or oral placebo (*plb*) and in 298 subjects randomised to receive intravenous insulin (*insulin i.v.*) or only observation (*obs*).

ESM Figure 2 – Insulin secretion-plasma glucose dose-response function in progressors ($n= 227$) and non-progressors ($n= 431$). Bsl = baseline; FU = follow up. Plots are mean $\pm$ SEM
