

Supplementary Figure 2

Supplementary Figure 2 Confirmation of siRNA induced knock-down. RS4;11 were electroporated with siRNA's targeting different transcription factors or non-targeting siRNA (siCtrl). Total protein was extracted 72h (RelA, RelB, Stat6, Smad3) or 48h (Smad2) after transfection and analyzed by Western Blotting. β -Actin was used as loading control. *unspecific bands.
