

Supplement 4: Comparison of ALK-positive and EGFR-positive cancer with ALK/EGFR-negative cancer that either responded durably to ICB (LTR) or progressed rapidly under ICB (RP). Tregs were significantly higher in ALK-positive cancer compared to RP, Th1 cells were significantly lower in ALK-positive cancer compared LTR. Cytotoxic cells, CD8+ T cells, exhausted CD8+ T cells, Th1 cells, T cells and macrophages were significantly lower in EGFR-positive cancer.
