

GBM

Non-malignant human brain

Supplementary Figure 2: Flow cytometry analysis of 5E17 reactivity to surgical tissue samples

Flow cytometry analysis of 5E17 reactivity to CD31-CD45-CD90+ GBM tumor cell from patients with GBM and CD30-CD45- nonmalignant human brain cells from patients with epilepsy. The results of staining with the isotype instead of anti-5E17 monoclonal antibody were used to draw the gate for 5E17-positive cells. Blue histogram indicates isotype control. SSC, side scatter.
