

Supplementary Figure 6

Caption: Flow cytometry histograms showing membrane PD-L1 expression in (A) HT29-control cells, (B) HT29-sh-CTSS cells, and (C) HT29-sh-CTSS cells treated with chloroquine (CQ). (D) Quantification of MFI, presented as mean $\pm$ SD from three independent experiments. Cells were seeded in six-well plates at a density of 2×10^5 cells/well and treated with 5 μ M CQ for 48 hours after 24 hours of initial incubation. Abbreviations: CQ, chloroquine; MFI, median fluorescence intensity.
