

Supplementary material to:

Haemosporidian blood parasites of passerine birds in north-western Siberia

Dina A. Yusupova, Yvonne R. Schumm, Aleksandr A. Sokolov & Petra Quillfeldt

Online Resource 2.

Examples of raw sequences (reverse and forward; during the assembly) a. — equal T (thymine) and C (cytosine) peaks, mixed homogenic infection. b. — A (adenine) peak is slightly lower than C peak; mixed homogenic infection. c. — sequence without double peaks and mismatches, one infection. d. — C peak is lower than T peak; there is no lineage associated with lower peak described in MalAvi and the pattern is not observed in other samples, therefore, considered as one infection.
