

Table Internal similarity within the found assemblages, with the contributing species.

Assemblage	Internal similarity (%)	Number of species	Species (contribution percentage)
A	18.00	4	<i>Billardia subrufa</i> (33.07%), <i>Halecium incertus</i> (33.07), <i>Schizotricha nana</i> (18.56), <i>Staurotheca nonscripta</i> (15.30)
B	83.33	1	<i>Symplectoscyphus frondosus</i> (100%)
C	17.69	10	<i>Abietinella operculata</i> (27.25), <i>Symplectoscyphus exochus</i> (27.05), <i>Symplectoscyphus liouvillei</i> (20.12), <i>Oswaldella terranova</i> (9.99), <i>Rhizorhagium antarcticum</i> (2.60), <i>Lafoea dumosa</i> (2.60), <i>Antarctoscyphus grandis</i> (2.60), <i>Symplectoscyphus anae</i> (2.60), <i>Symplectoscyphus glacialis</i> (2.60), <i>Schizotricha nana</i> (2.60)
