Virtual Non-Contrast Images from Dual-Layer Spectral CT:

Comparison with True Non-Contrast Across Abdominal

Structures

Supplemental Table 1

4-point Likert scale determinants for subjective image quality assessment.

Score	Overall Image Quality	Image Noise	Calcium Subtraction	Lesion Conspicuity
1	Excellent	None to minimal	None	Not distinct
2	Good	Mild	Minimal	Barely distinct
3	Poor but evaluable	Moderate	Moderate	Moderately distinct
4	Not interpretable	Severe	Significant	Definitely distinct
