

**Improved detection of local tumor progression after
ablation or resection of colorectal liver metastases using
[18F]FDG-PET/contrast-enhanced CT versus contrast-
enhanced CT alone: Results from a Dutch prospective
cohort**

ELECTRONIC SUPPLEMENTARY MATERIAL

Supplementary figure 1. Patient screening flow chart.

Supplementary figure 2. ROC-curves of the diagnostic accuracy of CECT (blue) and [^{18}F]FDG-PET/CECT (red) for the detection of new colorectal liver metastases (CRLM).

Supplementary figure 3. ROC-curves of the diagnostic accuracy of CECT (blue) and [^{18}F]FDG-PET/CECT (red) for the detection of extrahepatic disease (EHD).
