

Piniewska-Róg D, Heidegger A et al.: Impact of excessive alcohol abuse on age prediction using the VISAGE enhanced tool for epigenetic age estimation in blood

SUPPLEMENTARY MATERIAL

Supplementary Fig. 1 (a) Read depth at one CpG site per amplicon. (b) Normalized read depth (reads/total reads) of the respective eight CpG sites. The dashed line indicates the expected read distribution (one divided by the eight amplicons). Boxplots are colored by sequencing run (Run 1 & 2: N = 51, Run 3 & 4: N = 53).
