

Supplementary Figure 5: Communication Networks from Myeloid and Stromal Cells to T Cells in the CRC TME. (A) The bubble plot illustrates significant interactions mediated by ligand-receptor pairs, including TREM1-positive and TREM1-negative myeloid cells communicating with T cells, as well as ACTA2-positive and ACTA2-negative stromal cells interacting with T cells, all derived from tumor tissues. (B) Hierarchy plot depicting the cell–cell communication network mediated by NECTIN signaling pathways. Abbreviations: CRC, colorectal cancer; TME, tumor microenvironment, TREM1, triggering receptor expressed on myeloid cells 1; ACTA2, α -smooth muscle actin.
