ENTREQ Checklist

Item	Guide and description	Reported on line
Aim	State the research question the synthesis addresses	75-77
Synthesis methodology	Identify the synthesis methodology or theoretical framework which underpins the synthesis, and describe the rationale for choice of methodology (e.g. meta-ethnography, thematic synthesis, critical interpretive synthesis, grounded theory synthesis, realist synthesis, meta-aggregation, meta-study, framework synthesis).	133
Approach to searching	Indicate whether the search was pre-planned (comprehensive search strategies to seek all available studies) or iterative (to seek all available concepts until theoretical saturation is achieved).	89-90
Inclusion criteria	Specify the inclusion/exclusion criteria (e.g. in terms of population, language, year limits, type of publication, study type).	92-114
Data sources	Describe the information sources used (e.g. electronic databases (MEDLINE, EMBASE, CINAHL, psychINFO, Econlit), grey literature databases (digital thesis, policy reports), relevant organisational websites, experts, information specialists, generic web searches (Google Scholar), hand searching, reference lists) and when the searches	85-88

Westgate et al (2022), Women's experiences of care and treatment preferences for perinatal depression: a systematic review, Archives of Women's Mental Health. Corresponding author: Verity Westgate, Department of Psychiatry, University of Oxford, verity.westgate@psych.ox.ac.uk

	were conducted; provide the rationale for using the data sources.	
Electronic Search strategy	Describe the literature search (e.g. provide electronic search strategies with population terms, clinical or health topic terms, experiential or social phenomena related terms, filters for qualitative research and search limits).	85-114
Study screening methods	Describe the process of study screening and sifting (e.g. title, abstract and full text review, number of independent reviewers who screened studies)	116-123
Study characteristics	Present the characteristics of the included studies (e.g. year of publication, country, population, number of participants, data collection, methodology, analysis, research questions).	Table 1
Study selection results	Identify the number of studies screened and provide reasons for study exclusion (e.g. for comprehensive searching, provide numbers of studies screened and reasons for exclusion indicated in a figure/flowchart; for iterative searching describe reasons for study exclusion and inclusion based on modifications to the research question and/or contribution to theory development).	154-158
Rationale for appraisal	Describe the rationale and approach used to appraise the included studies or selected findings (e.g. assessment of conduct (validity and robustness),	140-144

Westgate et al (2022), Women's experiences of care and treatment preferences for perinatal depression: a systematic review, Archives of Women's Mental Health. Corresponding author: Verity Westgate, Department of Psychiatry, University of Oxford, verity.westgate@psych.ox.ac.uk

	assessment of reporting (transparency), assessment of content and utility of the findings).	
Appraisal items	State the tools, frameworks and criteria used to appraise the studies or selected findings (e.g. Existing tools: CASP, QARI, COREQ, Mays and Pope; reviewer developed tools; describe the domains assessed: research team, study design, data analysis and interpretations, reporting).	140-144
Appraisal process	Indicate whether the appraisal was conducted independently by more than one reviewer and if consensus was required.	140-144
Appraisal results	Present results of the quality assessment and indicate which articles, if any, were weighted/excluded based on the assessment and give the rationale.	161-166; 170-171
Data extraction	Indicate which sections of the primary studies were analysed and how were the data extracted from the primary studies? (e.g. all text under the headings “results /conclusions” were extracted electronically and entered into a computer software).	125-131
Software	State the computer software used, if any.	117; 137
Number of reviewers	Identify who was involved in coding and analysis.	135-136
Coding	Describe the process for coding of data (e.g. line by line coding to search for concepts).	133-138

Westgate et al (2022), Women’s experiences of care and treatment preferences for perinatal depression: a systematic review, Archives of Women’s Mental Health. Corresponding author: Verity Westgate, Department of Psychiatry, University of Oxford, verity.westgate@psych.ox.ac.uk

Study comparison	Describe how were comparisons made within and across studies (e.g. subsequent studies were coded into pre-existing concepts, and new concepts were created when deemed necessary).	136-138
Derivation of themes	Explain whether the process of deriving the themes or constructs was inductive or deductive.	136-138
Quotations	Provide quotations from the primary studies to illustrate themes/constructs, and identify whether the quotations were participant quotations or the author's interpretation	Table 4
Synthesis output	Present rich, compelling and useful results that go beyond a summary of the primary studies (e.g. new interpretation, models of evidence, conceptual models, analytical framework, development of a new theory or construct).	178-258
