

Figure S2. Interval timing performance of individual starlings

Data shown for each bird are mean points for PROBE trials during the final 4 days of the tri-peak procedure task, with the fitted 10th order polynomial (solid line). Dashed reference lines show the trained FI durations (SHORT, 5 s in red; MEDIUM, 15 s in green; LONG, 45 s in blue). Pecks to each of the keys are coloured red for lefthand key (trained on the 5 s FI), green for centre key (15 s FI) and blue for righthand key (45 s FI). Individual starling identity is denoted by a 4 letter code above each panel A to BB.
