

Table S1. Comprehensive summary of recorded taxa, detailing their occurrence, status, and trait categorization. For each taxon, the table provides: Frequency of species observations on plots with artificial and natural snow; Native Status, its status as native or non-native to the region; Status in Red List (SK), its categorization according to the IUCN Red List or a relevant national list (LC = Least Concern, NT = Near Threatened); and Trait Categorization, its classification into relevant functional groups (for detailed description of the functional groups see Table 3 in the main text).

Taxon	Artificial snow plots: Frequency (%)	Natural snow plots: Frequency (%)	Native Status	Status in Red List (SK)	Reproduction Type	Strategy Type	Life Form	Life Span	Leaf Persistence	Rosette	Vegetative Propagation	Elevational Belts of Plant
<i>Acer campestre</i>	3.33	0	Native		ssv	c	P	p	s	r	w,s	a,b
