

Suppl. Fig. 1. Data of all patients included. Kaplan–Meyer plots of progression-free survival (A) and overall survival (B) from the date of surgery by anesthetic technique. Survival curves were compared using the log-rank test.

Suppl. Fig. 2. (A) Percentage of patients operated on according to year and group (INHA, $n = 417$; TIVA, $n = 54$). (B) Kaplan–Meyer plots of progression-free survival (PFS) of patients operated on during 2010–2014 and 2015–2017 according to anesthetic technique during tumor resection. (C) Kaplan–Meyer plots of PFS of patients up to 24 months post-surgery who received TIVA and were operated on with and without intraoperative neurophysiological monitoring.
