

Article: Flow Simulation-based Particle Swarm Optimization for Developing Improved Hemolysis Models

Journal: Biomechanics and Modeling in Mechanobiology

Authors: B. Torner*; D. Frank; S. Grundmann; F.-H. Wurm

Affiliation: Institute of Turbomachinery, University of Rostock

Supplementary Material A: Visualization of equation 18, which is essentially a modified relative error estimation. The goal of the equation is to equally rank an underestimation and overestimation of the experimental value, while ensuring that the maximum possible error is equal to 1. This is to avoid bias towards small MIH values, as might be the case with RMS and other similar error estimates.
