Online Resource 1: Years of data used for each nutrient fraction for the 11 water quality monitoring stations used to model nutrient concentration and stoichiometry trends in the Red and Assiniboine River Basins, north-central North America.

ID	Station Name	Total Nitrogen	Total Phosphorus	Dissolved Inorganic Nitrogen	Total Dissolved Phosphorus
1	Assiniboine River at Kamsack	1993-2022	1974-2022	1993-2022	1974-2022
2	Qu'Appelle River near Welby	1993-2022	1975-2022	1993-2022	1975-2022
3	Assiniboine River at Brandon	1974-2021	1974-2021	1990-2021	1990-2021
4	Assiniboine River at Treesbank	1989-2021	1989-2021	1990-2021	1990-2021
5	Souris River near Westhope	1993-2022	1991-2022	1993-2022	1969-2022
6	Assiniboine River at Headingley	1974-1990, 1997-2021	1970-1990, 1997-2021	1970-1990, 1997-2021	1986-1990, 1997-2021
7	Red River at Fargo	1973-2022	1972-2022	1971-2022	1970-1973, 1994-1997, 2004-2022
8	Red River at Grand Forks	1993-2022	1958-2022	1991-2022	1969-2022
9	Pembina River at Windy Gates	1993-2022	1972-2022	1993-2022	1978-2022
10	Red River at Emerson	1993-2022	1960-2022	1993-2022	1976-2022
11	Red River at Selkirk	1974-2021	1970-2021	1970-2021	1986-2021
