

Suppl.FIG1. Fluorescent microscope image of U2OS cells structures which was found powerful in the controlling of the migration of cells. Smooth surface is seen in the middle. Nuclei are stained blue and β -tubulin in green after a two days culture on polycarbonate. Heights of the structures vary up to 10 μm .

Suppl.FIG2. Smooth surface and pseudo periodic structure are arranged as the logo of the university. U2OS cells were grown two days on this steel substrate.
