

Resistance to FOXM1 Inhibitors in Breast Cancer is Accompanied by Impeding Ferroptosis and Apoptotic Cell Death

Suppl Figure S1

Supplementary Figure S1. Dose response curves showing growth inhibitory effects of DHA or JKE1674 on the viability of WT parental and NB73 resistant MCF7 cells. Cells were treated with control vehicle or the indicated concentrations of DHA or JKE1674 for 72h and cell numbers were monitored by WST-1 assay. Values are expressed relative to those of the control vehicle cells, and are shown as the mean $\pm$ SEM of four determinations. IC_{50} values were determined.
