

Supplemental Figure S1

Supplementary Figure S1: Correlation between the electrical activity and A β in WT and AD cerebral organoids from three independent differentiations - data in absolute values.

A, B, C, D: A β 42/40. **E, F, G, H:** A β aggregate size. Trends to a positive correlation can be mostly observed in AD (full red symbols), but not in WT (empty blue symbols), in both A β 42/40 (A, B, C, D) and A β aggregate size (E, F, G, H).
