

Supplementary Tab. 1 Code manual for inserting conditional information. *Note: Multiple error codes can be given at once, e.g. confusing $P(D|T+)$ (correct) with $P(D \cap T-)$ is classified as joint occurrence and negation error.*

Label	Explanation
Correct	Correct answer with no additional wrong answer
Mistakenly checked “not possible”	Erroneously checked the box "It's not possible to fill in the data"
Inverse error	The conditional events have been confused inversely, e.g., $P(D T+)$ was confused with $P(T+ D)$.
Joint occurrence	The conditional probability (correct) was confused with a joint probability (incorrect), e.g. $P(D T+)$ was confused with $P(D \cap T+)$.
Negation error	- The answer was correct apart from missing a negation, e.g., $P(D T-)$ was entered at the position of $P(D T+)$, or - The answer was correct apart from erroneously adding a negation, e.g., $P(D T+)$ was entered at the position of $P(D T-)$, or - Both dichotomous characteristics were confused with their complementary events, e.g. $P(D T-)$ was confused with $P(\bar{D} T+)$.
Incomplete	- Only the whole, but not the part, was entered, or - Only the part, but not the whole, was entered. (both for frequencies only)
Multiple answers	The given information was entered multiple times, containing at least one wrong answer.
Other uniquely classifiable errors	- No data was filled in at all, or - The conditional information was entered in the place of a marginal probability/frequency, e.g. $P(D T+)$ was entered in the place of $P(D)$ or $P(T+)$, or - The part was entered correctly, but the whole was entered in one of the inner four cells instead of a marginal cell (2×2 tables and frequencies only).
Unknown error	The error matches none of the above listed classifications.
