

Supporting Information 3 Area under disease progress curve (AUDPC) of Cercospora leaf spot (CLS) in two sugar beet varieties with different susceptibility treated with different fungicide programmes. (a) 10 field trials with high disease pressure of CLS. (b) 7 trials with lower disease pressure where the resistant variety did not reach the treatment threshold. Germany and Austria 2020-2022. Solid lines indicate medians and dashed lines arithmetic means, four replicates per trial; different letters indicate significant differences among treatments at high or low disease pressure, Tukey-Test, $p \leq 0.05$; n/a: not applicable
