Number of women is 629,038 and number of men is 650,044.

The average marginal effects are based on estimates from Poisson regression models.

Model 1 contains no control variables. Model 2 includes Birth cohort, Mother tongue, and Educational level.

Models 3 and 4 stepwise add Municipality of residence and Marital status.

Change of religious denomination refers to religion at age 45 vs. religion at age 15.

Educational level, Mother tongue, Municipality of residence, and Marital status refers to the situation at age 45.

Educational level, Mother tongue, Municipality of residence, and Marital status refers to the situation at age 45.

Change of religious denomination refers to the situation at age 45 versus at age 15.

Average marginal effects of Municipality of residence are not displayed because of the large number of parameters (457).
