

Supplemental Fig. 1. Expression of Sn and Fc γ R_s on BMDM. BMDM from WT, Sn^{-/-} and Sn^{W2QR97A} mice were cultured with IFN- α to stimulate Sn expression (A) and stained with anti-CD16/32 (B), anti-CD64 (C), Ly17.2 (D), or an isotype matched mAb. Representative experiments (left panels) and the summary from 3 independent experiments (right panels) are shown.
