

Supplementary Table S1. Post hoc pairwise comparisons of immobilization in *D. magna* exposed to three *P. parvum* strains (ODER1, RCC3427, UTEX2797) at 24, 48, and 72 h. Estimates are presented on the logit scale with associated standard errors (SE), test statistics (z-ratio), and Tukey-adjusted p-values. Only estimable contrasts are shown; comparisons involving the control and RCC3427 strain were excluded due to quasi-complete separation.
