

Fig. S1 Ordination diagrams of principal component analysis (PCA), showing the gradients in species composition of (a) arachnids, (b) true hoppers, (c) true bugs, (d) orthopteroid insects, (e) leaf beetles, and (f) weevils according to management type: grazing (yellow), grazing and burning (red), mowing (blue) and abandonment (green). Environmental variables (arrows), i.e. vegetation cover, vegetation height (annual average) and plant species richness, are passively projected onto the diagram.
