

Supplementary Table 2. Model evaluation metrics for ensemble models summarized by the median, mean, and mean weighted by the area under the ROC of single models. ROC-scores are given for testing and evaluation data along with the chosen cut-off (in % habitat suitability) and resulting sensitivity and specificity of the respective ensemble models.

ensemble method	testing data	cut-off	sensitivity	specificity
median	0.888	41.3	91.124	72.780
mean	0.891	43.9	91.124	74.000
weighted mean	0.892	44.0	91.124	74.102
