

Supplementary Information 5 for:

Smallholder Land-Use Decisions in a Tropical Agro-Forest Frontier in Southern Mexico

Supplementary Information 5:

Generalized linear models showing the social-ecological variables that had a significant effect on smallholders' land-use decisions in Chajul and Loma

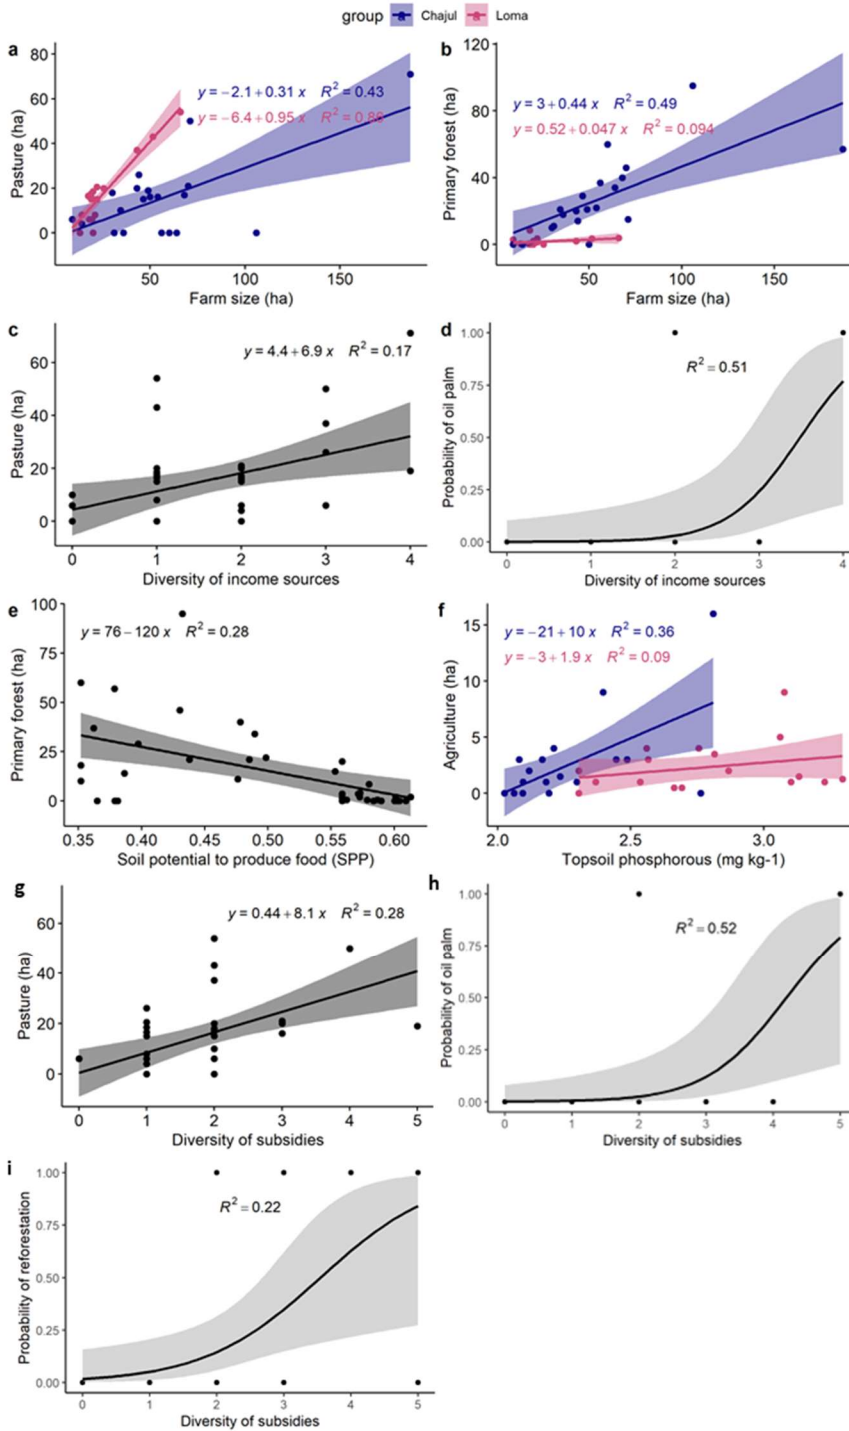

Fig. 1 Generalized linear models showing the social-ecological drivers that had a significant effect on smallholders' land-use decisions in Chajul and Loma at the local-household level (a-d), regional-biophysical level (e-f), and national-institutional level (g-i). Purple represents Chajul,

pink represents Loma, and grey represents all farms combined (no significant interaction effect with *ejido*). Model details are shown in Table 3 within the manuscript
