

Online Resource 1 Real-world data collection in the Cancer Registry of Norway (CRN) and study population inclusions and exclusions

The CRN automatically receives pathology reports from hospitals, whereas clinical diagnostic and surgical reports are sent manually from hospitals. Radiotherapy data is obtained directly from radiotherapy machines, and dispensed oral anti-cancer medicine, such as temozolomide, from the Norwegian Prescription Database. The CRN also receives updated vital status of cancer patients from the Central Population Registry, which also provides population and mortality counts.

Due to the automatic capture of pathology reports, there is almost 100% capture of histologically confirmed cases in the CRN, whereas clinically diagnosed cases that remain untreated depend on hospitals' active submission of clinical diagnostic reports to be captured.

Article title: Unveiling regional differences in glioblastoma patient survival with real-world data from the Norwegian brain tumor quality registry

Journal name: Journal of Neuro-Oncology

Author names: Cassia Bree Trewin-Nybråten¹, Paul Christopher Lambert^{1,2}, Kirsten Marienhagen³, Lasse Andreassen⁴, Tom Børge Johannesen¹, Pitt Niehusmann^{5,6}, Leif Oltedal^{7,8}, Stephanie Schipmann^{9,10}, Anne Jarstein Skjulsvik^{11,12}, Ole Solheim^{13,14}, Tora Skeidsvoll Solheim^{12,15}, Terje Sundstrøm^{8,9}, Einar Osland Vik-Mo^{16,17,18}, Petter Brandal^{18,19,20}, Tor Ingebrigtsen^{4,21}, Erlend Skaga^{16,17}
