

Table S3 Coefficients from multinomial logistic regressions predicting the likelihood of Mexican migrants to remit and save from legal status, deportations, and selected control variables between the years 1970-2019, for a reduced sample of migrants who returned from their most recent trip less than ten years before the survey

Independent variables	Likelihood of remitting and saving	Likelihood of remitting only	Likelihood of saving only
Legal status			
Undocumented	0.179 (0.128)	0.253* (0.125)	0.166 (0.182)
Deportation indicator			
Lagged deportations/100,000	-0.393** (0.141)	-0.009 (0.132)	-0.546* (0.257)
