

AF type (persistent or paroxysmal)

Supplementary Figure3:
ROC Curve–Based Assessment of Diagnostic Performance (AF type)

The AUC for AF type (persistent or paroxysmal) using all six candidate genes was 0.95 (95% CI, 0.88–1.00). Among these, the AUCs for the individual genes were as follows: *DIRAS3*, 0.84; *CYP26B1*, 0.88; *PRG4*, 0.61; *ITLN1*, 0.66; *FKBP5*, 0.69; and *TUBA3D*, 0.62.
