Table of Contents

Sections 3, 4, and 5 present trajectories as well as scatterplots for individual patients. Within each (sub-)chapter, the first plot corresponds to the data of a single patient, the second plot to a different patient, and so forth.

1.Secondary hypothesis- exploration of the relationship between the concentrations

Only two hypoglycemic values occurred in the data and they could not be assigned to any brain parenchyma glucose value, so no hypoglycemia could be evaluated in the model. Therefore this group is missing.

Table 1B: Fixed effect, standard deviation of the random effects and residuals estimates derived by a mixed model regressing brain parenchyma glucose on plasma glucose with a slope break ((180/18.02) mmol/L) in plasma glucose.

2. Results of sensitivity analysis

To assess the sensitivity of the models to outliers that were determined with the help of box plots, outlying glucose (plasma glucose ≥ 11.5 mmol/l, CSF glucose ≥ 6 mmol/l) and lactate (plasma lactate ≥ 2mmol/l, CSF lactate ≥ 6 mmol/l) data were removed and the new data set was used to estimate the regression parameters.

Table 3B: Fixed effect, standard deviation and correlation estimates derived by a univariable mixed model
regressing brain parenchyma glucose on CSF glucose excluding outliers (outlier: CSF glucose ≥ 6).

	Estimates	**CI 2.5%**	**CI 97.5%**	**p-value**
1. Fixed Effects

Table 6B: Fixed effect, standard deviation and correlation estimates derived by a univariable mixed model regressing brain parenchyma glucose on plasma lactate excluding outliers (outlier: plasma lactate ≥ 2).

	Estimates	**CI 2.5%**	**CI 97.5%**	**p-value**
1. Fixed Effects				
Intercept	4.1875	3.0602	5.3214	<0.001
Lactate Plasma	0.0236	-1.1502	1.1859	0.9682
2. Random Effects and Residuals				
sd residuals	1.0700	1.0406	1.1009	
sd intercept	3.5012	2.7571	4.4411	
sd Lactate Plasma	3.5799	2.7890	4.5724	

The sensitivity analyses support the main results. Only the connection between CSF and brain parenchyma lactate is slightly not significant anymore although the effect is slightly higher. This is due to the smaller sample size and still supports the results.
