

Supplementary Figures

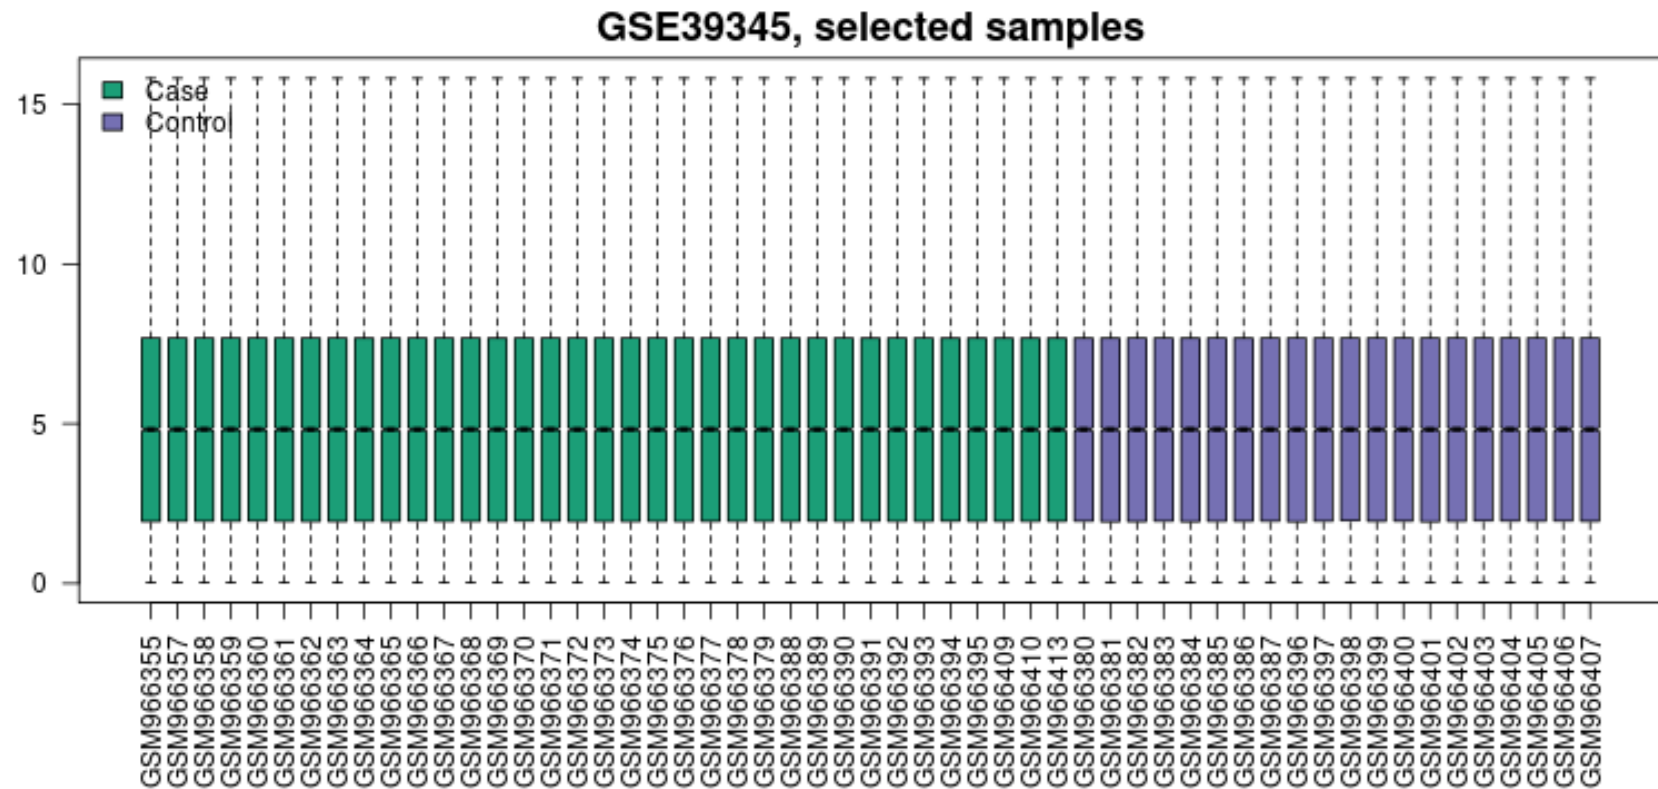

Fig. S1. Box plot visualization of normalized gene expression values comparing lung cancer specimens (case) and healthy control samples in the GSE39345 dataset.

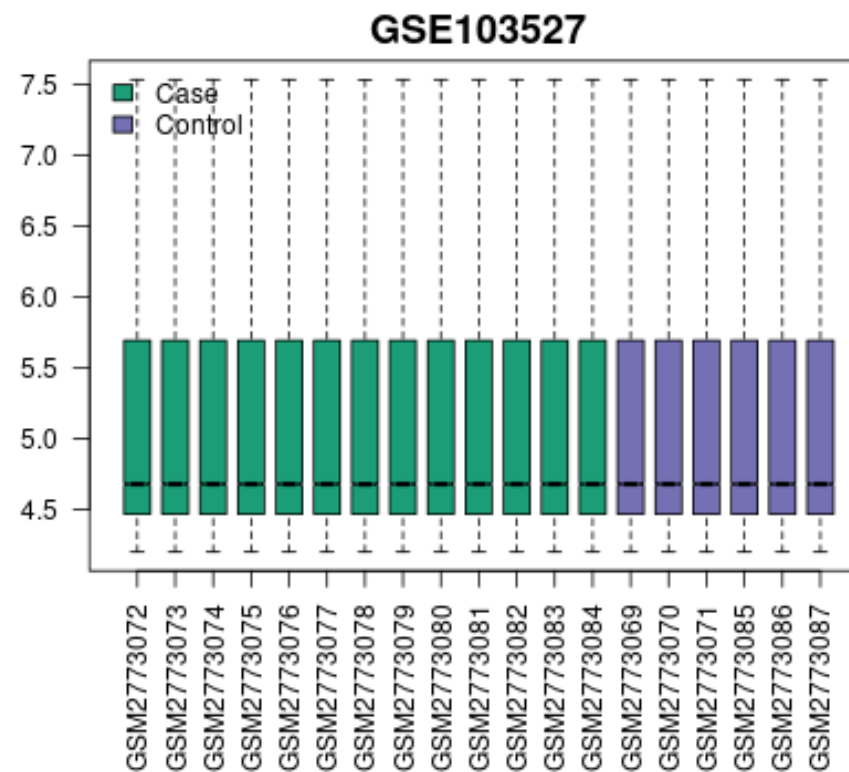

Fig. S2. Box plot visualization of normalized gene expression values comparing lung cancer specimens (case) and healthy control samples in the GSE103527 dataset.

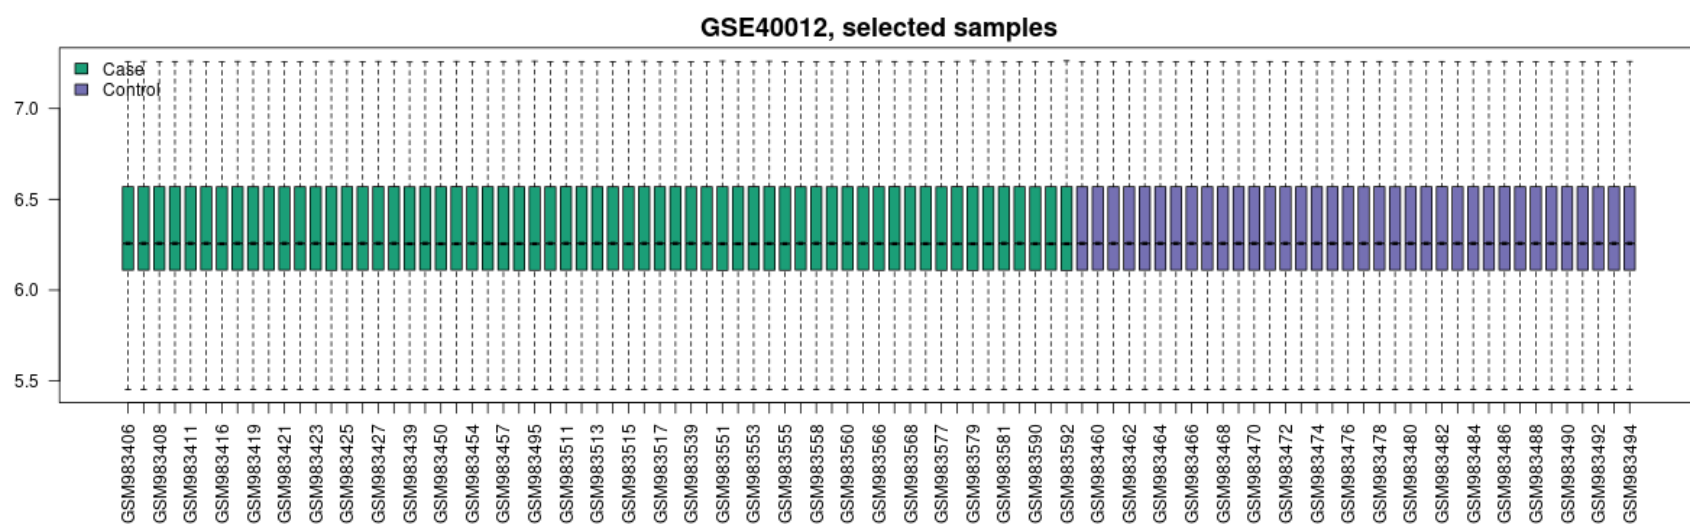

Fig. S3. Box plot visualization of normalized gene expression values comparing lung infection specimens (case) and healthy control samples in the GSE40012 dataset.

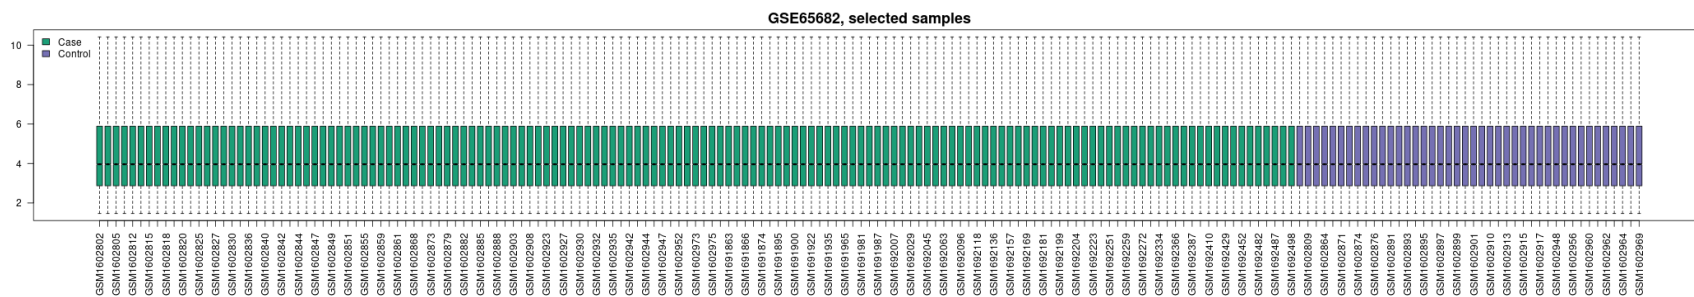

Fig. S4. Box plot visualization of normalized gene expression values comparing lung infection specimens (case) and healthy control samples in the GSE65682 dataset.

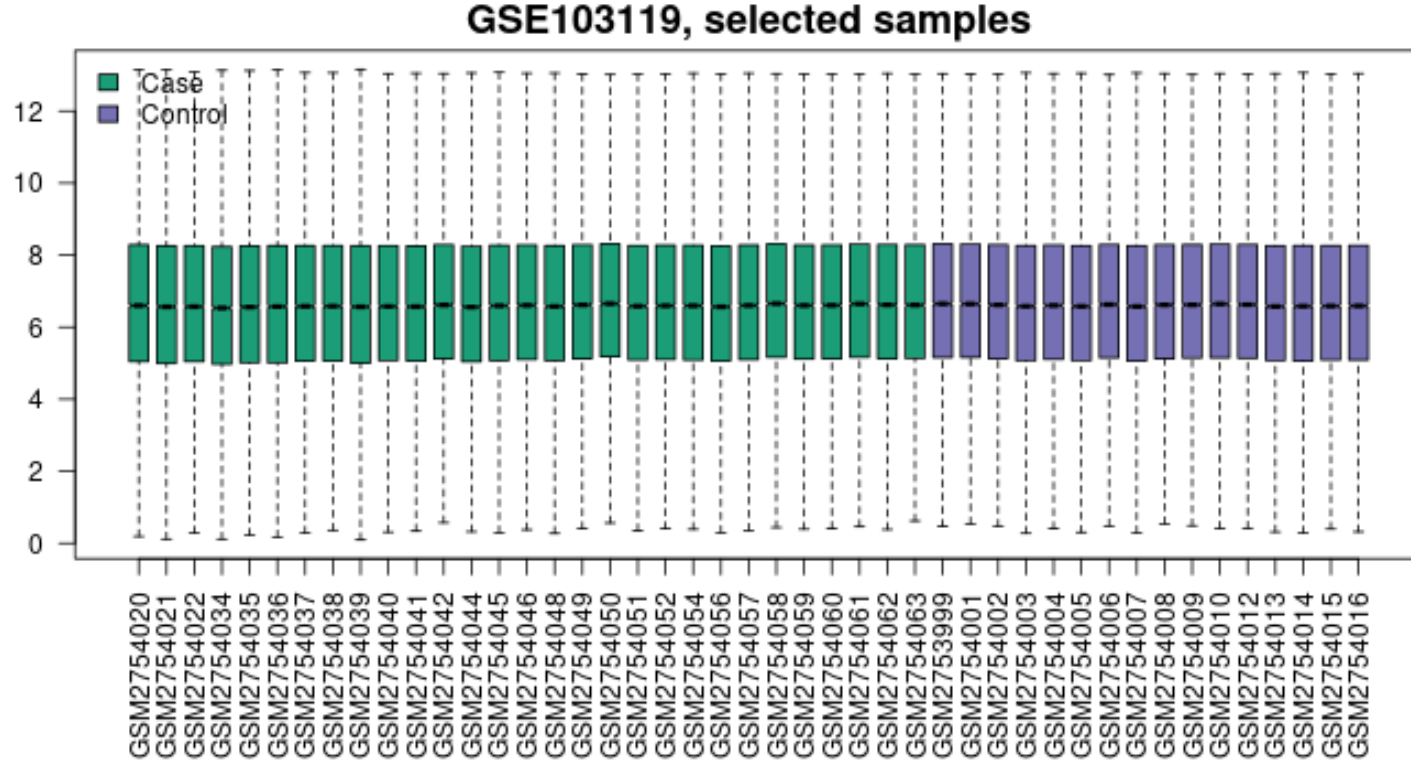

Fig. S5. Box plot visualization of normalized gene expression values comparing lung infection specimens (case) and healthy control samples in the GSE103119 dataset.

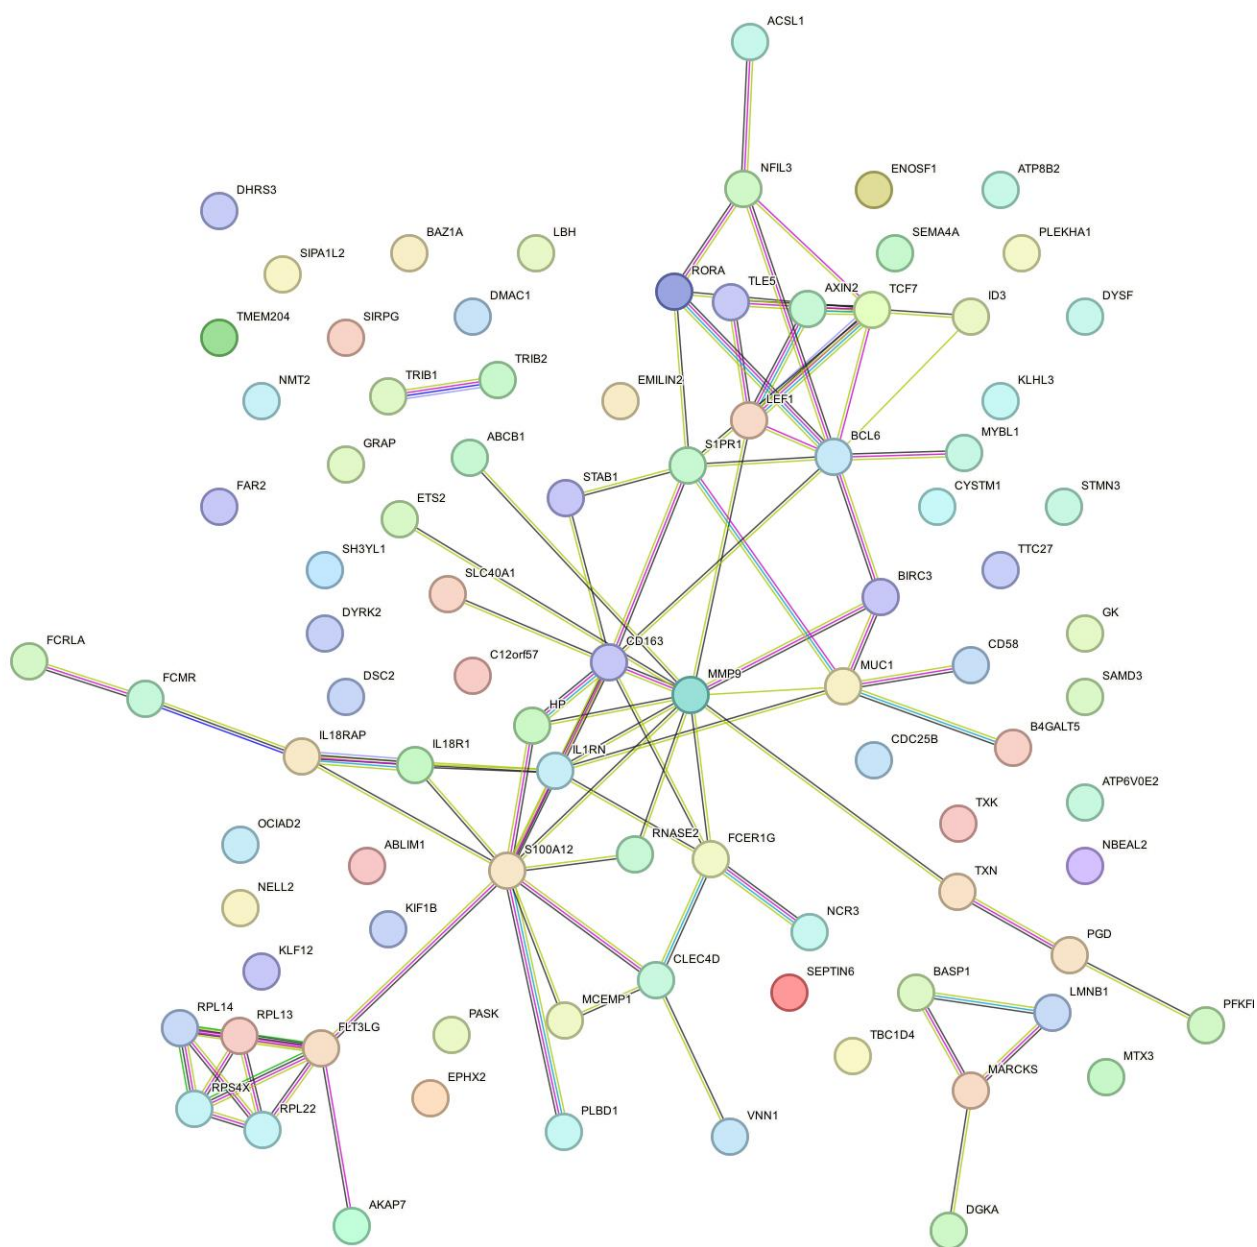

Fig. S6. Protein–protein interaction (PPI) network of validated DEGs.
