Q10 - Do you have any additional recommendations regarding usage or implementation to share?

Do you have any additional recommendations regarding usage or implementatio...

No

I used the examples from Big Interview to then draft my own answers to commonly asked questions

Practice practice practice!

No, very intuitive

There are a lot of different opinions regarding how to prepare for a residency interview out there, and I think Big Interview Medical does a good job of helping make the initial framework as of what information might be good to try to include. I would not necessarily follow all of Big Interview Medical's recommendations as they are written.

Probably a great program but I didn't use it. It felt extremely unnatural and I could get past it

I used the program to help come up with answers to common interview questions but did not use the interview prep recording features. I found it helpful to think about how I might answer certain questions so for that reason would recommend it.

It was a good starting place, especially with the amount of possible questions they had. That was what I mainly used it for. The AI looking at your recording was good at telling you about eye contact and speech patterns, but not as good at actually being able to tell you how to improve your answer and interactions with humans.

Big Interview Medical only made me more stressed, making me feel like I would never be prepared enough. I had to stop using it and just focus on the basics on my own.

Big interview was so helpful, I cannot recommend it enough.

Advertise this more! I almost missed it

Q11 - Do you have any additional feedback you would like to share?

Do you have any additional feedback you would like to share?

No

Amazing resource that made me feel prepared for interviews. Great resource even when they transition to in person.

What was most useful for me was the lists of common questions and the guides on how to create answers to some of the most common questions. It was helpful to have a framework for preparing answers, because otherwise I think I wouldn't have known what to expect in interviews.

I didn't think they had a great explanation for the "Tell me about you" question

I would have liked a more formal option to practice interviewing with faculty who could give more feedback than Big Interview Medical. It was hard to gauge how I was doing in my virtual interviews. I think having feedback from actual interviewers on my answers and how I generally appeared virtually would have been really helpful.

Much of the advice from Big Interview Medical did not apply to Pediatrics. Many of the places I interviewed did not ask any behavioral questions. Also, although the "elevator pitch" section applied, the way they went about it was not the way I talk, so it would not have been an accurate representation of who I am.
