

Supplementary Material 4

Output of the uncorrected and corrected models of the Dutch data with *minority group members'* attitude towards White children at post-intervention (T1) as outcome. The significant control variables in the corrected model might explain loss of significance of the intervention effect in the uncorrected model.

Explanation of variable names:

attwhitet0: Attitude towards white children at baseline (T0)
group: Intervention effect for the minority group (0 = control, 1 = intervention)
age: Age in years
gender: Gender (0 = boy, 1 = girl)
majmin: Group status (0 = majority, 1 = minority)
intgrmaj: Intervention condition * group status interaction term (1 = majority member in intervention group, 0 = else)
mordist0: Moral disengagement at baseline (T0)

Uncorrected model

Residuals:

Min	1Q	Median	3Q	Max
-2.67503	-0.35402	0.08259	0.42967	2.57221

Coefficients:

	Estimate	Std. Error	t value	Pr(> t)	
(Intercept)	1.7624	0.4010	4.395	2.15e-05	***
