

Supplementary Figure S5

Supplementary Figure S5. Vps4A^{E288Q} expression does not cause accumulation of Arrdc4 in class E compartment unlike its effect on Arrdc1. Confocal images of HEK293T cells transfected with Vps4A^{E288Q} show Arrdc1 co-localization with class E compartment endosomes (panel B) whereas Arrdc4 is not recruited into these structures (panel D). Arrdc1 and Arrdc4 localization with Vps4A^{WT} is also shown (panels A and B, respectively). Scale bars represent 10 μ m.
