

Supplementary Table S1. Marker expression of cells from human amniotic fluid

Expression of markers characteristic of certain stem cell populations was assessed by flow cytometry. Cells were obtained from amniocentesis specimens, cultured as described, harvested from the primary cultures without expansion, and incubated with FITC-labeled monoclonal antibodies. Values are mean $\pm$ s.e.m. for five independent amniotic fluid specimens.

Marker	Percentage Positive
CD117 (c-Kit)	0.9 $\pm$ 0.2
CD34	2.8 $\pm$ 0.3
CD105	19.5 $\pm$ 1.1
CD133	0.9 $\pm$ 0.2
